

## Task 11: Table and <div>

**" Explain the use of tables and <div> elements for layout in CSS. Create an HTML document that uses both tables and <div> elements to present content. Style them using CSS, and discuss when to use tables versus <div> elements for layout."**

➔ Tables vs <div> for Layout:

- Tables are useful for displaying tabular data.
- <div> is more flexible and is commonly used for layout with modern techniques like Flexbox.
