

Task 9: Alignment and Display

" Discuss how to align elements in CSS and the different display properties available (block, inline, inline-block, flex). Create an HTML document that showcases various alignment techniques, including text alignment, vertical alignment, and the use of the display property. Explain each method used."

➔ **Aligning Elements and Display Properties:**

- Text alignment is managed by properties like text-align: center;.
- Display properties include block, inline, inline-block, and flex for controlling the layout of elements.
