Task7: Grid System and Breakpoints

"Describe the CSS grid system and how it can be implemented using CSS or frameworks like Bootstrap. Create a responsive layout using a grid system that adapts to different screen sizes. Include breakpoints in your media queries and explain how they affect the layout."

➔ A CSS grid system divides the page into rows and columns. Breakpoints adjust the layout based on screen size.

➔ Example:

   o **Scss**

```
.container {
 display: grid;
 grid-template-columns: repeat(3, 1fr);

 @media (max-width: 768px) {
  grid-template-columns: 1fr;
 }
}
```
