Task 8: Color and Background

" Explain how to apply colors and backgrounds in CSS. Create an example that demonstrates various ways to set colors (hex, RGB, HSL) and background properties (solid color, gradient, image). Provide an HTML structure and the CSS styles needed to achieve different effects."

➔ How to Apply Colors and Backgrounds in CSS: CSS allows you to apply different types of colors and backgrounds:

   o Colors: Can be set using formats like hex, rgb(), or hsl().

   o Backgrounds: Can be solid colors, gradients, or images.
